## LISTING OF CLAIMS:

Claims 1. - 187. (Cancelled)

188. (Original) A method for delivering laser energy to an electrical circuit substrate, comprising:

simultaneously outputting a plurality of laser beams from a laser beam source;

independently steering said plurality of laser beams to impinge on said electrical circuit substrate at independently selectable locations; and

focusing said plurality of laser beams to different independently selectable locations, said focusing comprising moving at least one optical element, without  $f \not O$  f-theta optical elements.

- 189. (Previously Presented) The method claimed in claim 188, wherein said simultaneously outputting comprises outputting a first laser beam, and splitting said first laser beam into said plurality of laser beams.
- 190. (Previously Presented) The method claimed in claim 189, wherein said splitting comprises splitting said first laser beam with an acousto-optical deflector.
- 191. (Previously Presented) The method claimed in claim 190, wherein said splitting comprises directing ones of said plurality of laser beams in independently selectable directions.
